"Indispensible" Invisible Suppliers

Customer:Biomedical Science Laboratory Equipment ManufacturerProject:Invisible Supplier Programme & Implementation of Kanban Stock System

Through our Zero Cost Programme we delivered £40,000 in savings for a major manufacturer, reduced their stockholding and decreased operational costs significantly.

CHALLENGE

To optimise supply chain efficiency and reduce operating costs, this manufacturer planned to outsource an element of stores management and spares supply to a third party.

Already enjoying a successful partnership with Worldwide Engineering for the supply of pneumatic components and fasteners, our client invited us to tender for the contract.

The project brief was to create a sustainable and cost-efficient source of supply: managing an onsite stock and supply chain to ensure excellent availability of spare parts with transactional costs kept to a minimum.

OUTCOME

We have invested in managing the client's stock by providing a special "Twinbin" stock management solution: there is now no need for the client to handle the stock as it is counted and replenished by Worldwide Engineering out with normal working hours.

Additionally, we provide a weekly invoice which reduces the overall involvement of the client.

After the first phase implementation, Worldwide Engineering has saved the client around £40,000 by applying our lean management approach.

We call it our Invisible Supplier Programme: our clients call it indispensable.
